

<<輸出至螢幕>>#不適用於 Ruby on Rails

字串用” ” 標示→控制字元有效果，若用’ ’ 標示直接顯示不做任何動作

變數不加

```
irb(main):001:0> puts "Hello World"
```

```
>>Hello World
```

```
irb(main):004:0> puts 3/4
```

```
0      #整數 3/4 答案案 0
```

```
irb(main):005:0> puts 3/4.to_f
```

```
0.75   #3/4 用浮點數表示=0.75
```

```
irb(main):006:0> a=3
```

```
=> 3
```

```
irb(main):007:0> puts a+a
```

```
6
```

```
irb(main):001:0> puts "hello\n world"
```

```
hello
```

```
 world
```

```
irb(main):002:0> puts 'hellow\n world'
```

```
hellow\n world
```

也可以使用 c 語言的 printf()

```
irb(main):003:0> a=1
```

```
=> 1
```

```
irb(main):004:0> printf("test%d",a)
```

```
test1
```
